

METHOD AND SYSTEM FOR AUTOMATICALLY GENERATING FORECASTS

ABSTRACT OF THE DISCLOSURE

A method and system for defining and generating forecasts. The forecast system receives a forecast definition from a user, generates a forecast in accordance with the forecast definition, stores a forecast snapshot of the generated forecast, and presents to users forecast information derived from the forecast snapshots. A forecast definition specifies the participants to be included in a forecast and when to generate the forecast. At the scheduled time, the forecast system automatically generates the forecast and stores the forecast snapshot.
